¹ Volumes reflects the number of bound paper volumes, including copies, volumes in a title, and eBooks

² Titles reflects the number of titles for all items, regardless of format.

³ Total patrons for 2014 was estimated due to a system failure during May/June, hence no data was collected during that period.

⁴ The large increase in patron counts for 2015 is primarily due to the completion of the new South entrance to the library in September. This has carried over in to 2016 with a full year worth of data to affect that count.

⁶ The manner to determine eBooks changed for 2016 and hence shows a significant increase total volumes.

⁷ The final figures for 2017 are estimated because of a gate change that occurred in November and the inability to extract daily stats from the system collecting that data.

⁸ The system to monitor patron counts at the gates was not collecting data during 2018.

⁹ A new system to collect patron counts was brought on board in 2018 but not able to collect stats until March 2019, hence these figures are estimated.

¹⁰ Patron counts for 2020 dropped significant due to restrictions imposed because of COVID-19

¹² The increase in numbers is primarily due to the sidewalk north of the atrium being closed for much of the year and traffic being required to pass through the library
